EXPERIENCE

Omniful, Software Developer | [Golang](#), [AWS](#), [SQS](#), [Kafka](#), [PostgreSQL](#)

Jan 2025 - Present

- Identified and resolved about **300+ bugs**, enhancing data consistency and reducing errors across the system.
- Introduced a reusable, **cache-backed dynamic rate limiter** on client-facing APIs, with DB-controlled limits per client. The solution decreased server load by **40%**, improved fault tolerance, and quick update of ratelimits as per traffic.
- Applied **SOLID** design principles to refactor the external WMS integration module, lowering **technical debt by 20%** and reducing code required for future integrations by **50%**.
- Designed and implemented a generic **inventory sync flow** from external WMS to Omniful systems, reducing this feature's development effort for new integrations by **20%** and enabling faster onboarding for clients with **large catalogs** and hubs.
- Enhanced **real-time inventory** synchronization with a distributed caching layer, reducing database and external, inter-service API calls by over **30%** and improving response latency.
- Architected a horizontally scalable inventory sync system capable of handling **1000+** warehouses and **100K+** SKUs per client, resolving prior **scalability bottlenecks** and ensuring consistent, low-latency stock synchronization.
- Introduced observability by adding structured logging and alerting, reducing issue and bug lookup time by **40-60%** and improving system reliability.

SeedsAI, Software Developer Intern | [Python](#), [FastAPI](#), [Websockets](#), [AI Agents](#), [Calling Bots](#).

Oct 2024 - Dec 2024

- Optimized the AI calling pipeline, reducing agent response latency by up to **2 seconds** and enhancing real-time efficiency.
- Planned, developed, and released features like automatic call transfer and API hits during AI Agents calls.

Creatvise, Backend Engineer Intern | [Golang](#), [OAuth2](#), [Microservices](#), [Postgres](#), [Google Cloud](#)

Oct 2023 - Jul 2024

- Designed a **scalable** cloud file upload **microservice** in Golang, slashing infrastructural costs by **35%**.
- Engineered a robust OAuth2 **authorization microservice** in Golang, deployed on **Cloud services** for authentication.
- Implemented **cookie-based OAuth2** using Next.JS Serverless Functions, strengthening **backend security**.

EDUCATION

YMCA University of Science & Technology, B.Tech in Computer Engineering | Faridabad, India.

Dec 2021 - Jul 2025

- CGPA : **8.3 / 10.0**.
- As **Joint Secretary** of Manan, the **Coding Society**, led the organization of workshops, sessions, and competitions in various Computer Science domains, resulting in the active engagement and skill enhancement of **500+ students**.

PROJECTS

Go Music – [Golang](#), [Web Scrapping](#), [Concurrency Control](#), [File Caching](#), [Audio Codecs](#).

[Github](#) | [Live](#)

- Created a **cross-platform CLI** application in **Golang** for **YouTube music downloading**, playing and searching.
- Enhanced **code quality** by applying **SOLID principles** and design patterns, cutting code redundancy by **30%**.
- Built a **bare-metal** YouTube scraper cutting search time to **under 200 milliseconds**, enhancing user experience.

BingeChat – [Golang](#), [Gin](#), [Zap](#), [WebRTC](#), [WebSockets](#), [Concurrent Mechanisms](#), [ReactJs](#)

[Github](#)

- Built a **Random Video chat platform** with Golang, WebRTC, and ReactJS, achieving **2500+ impressions** on day one.
- Utilised **object-oriented design principles** to architect the codebase, reducing redundancy by **40%**.
- Utilized **structured and leveled logging** with Zap logger, reducing **bug detection time** by **70%**.

Github Roaster– [Python](#), [Scrapping](#), [LLM](#), [Generative AI](#), [AWS](#), [Webserver](#), [SSL](#), [Nginx](#).

[Live](#)

- Created an **AI platform** leveraging LLaMA to humorously critique **GitHub profiles**, attracting high user engagement by combining entertainment with feedback.
- Launched a **roasting AI web** interface on **AWS EC2**, attracting **6,000 developers** all over the world on the **first day**.

SKILLS

Programming Languages: Golang, Python, C/C++, JavaScript.

Development Technologies: Gin (Golang), AWS SQS, GORM, Websockets, WebRTC, PostgreSQL, Server Deployment, Git, GitHub, Kafka, React, Selenium, Next Js, Linux.

Software Development: Object Oriented Design Patterns, Operating System, Computer Networks, Event-Driven Systems.

ACHIEVEMENTS

- Awarded 1st Position in Hacked 2022 - Hackathon:** Secured first prize among 50+ teams from top Universities by creating a WhatsApp AI chatbot using text completion models in an offline hackathon at BM Munjal University.
- AWS ML & AI Scholar 2023:** Achieved a top 1000 global ranking in the Amazon Deep Racer Challenge by optimizing the reinforcement learning algorithm, earning the prestigious AWS AI & ML Scholarship from Amazon.
- SnackDown 2021 Pre Elimination:** Ranked 115 among 3500+ participants globally and qualified for the Pre-Elimination Round of CodeChef's SnackDown 2021 by solving 3 out of 6 problems.
